

NORM ENGINEERING STICK RAKES

Suitable for raking up:

- » Small Rocks
- » Debris
- » Rubble

Australian manufactured

The stick rake design includes dual rakes each having a different tyne spacing. The top rake section is designed with the tynes spaced wider apart to allow for quick raking over a large surface area, while the bottom rake section is designed with the tynes closer together to handle finer raking.

Sizes
up to
3000mm.

It is a simple process to flip your attachment to make use of both rakes. Remove the 4 locking pins and manoeuvre your vehicle to the opposite side, once you have reattached the pickup you replace the locking pins.
